

INFLUENCE OF INCLUSIVE EDUCATION POLICIES ON LEARNING OUTCOMES IN NIGERIAN SCHOOLS

BY

[STUDENT'S FULL NAME]

[MATRIC NUMBER]

BEING A RESEARCH PROJECT SUBMITTED TO THE DEPARTMENT OF EDUCATIONAL MANAGEMENT,
FACULTY OF EDUCATION, UNIVERSITY OF LAGOS, AKOKA, LAGOS STATE

IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR THE AWARD OF BACHELOR OF SCIENCE (B.Sc.)
DEGREE IN EDUCATIONAL MANAGEMENT

[MONTH, YEAR]

CERTIFICATION

This is to certify that this research project titled "Influence of Inclusive Education Policies on Learning Outcomes in Nigerian Schools" was carried out by [STUDENT'S FULL NAME], and has been read and approved as meeting the regulations governing the award of the degree of Bachelor of Science (B.Sc.) of the University of Lagos.

DEDICATION

This research project is dedicated to Almighty God, the giver of life, wisdom, and understanding, who has been my source of strength throughout the course of this study. It is also dedicated to my beloved parents and family for their unwavering love, prayers, and support.

ACKNOWLEDGEMENT

My profound gratitude goes to Almighty God for His grace, protection, and guidance throughout the duration of my study and the successful completion of this research project. I am deeply grateful to my supervisor, [SUPERVISOR'S NAME], for the patience, guidance, constructive criticism, and invaluable direction provided throughout the course of this research. I also wish to appreciate the Head of Department, the lecturers of the Department of Educational Management, and my course mates for their support and friendship. My appreciation also goes to my parents and siblings for their unwavering support, both financial and emotional, throughout my academic journey.

ABSTRACT

This study examined influence of inclusive education policies on learning outcomes in nigerian schools, using undergraduate students of the University of Lagos as a case study. The study was guided by three specific objectives: to examine the extent to which respondents exhibit the key attributes of influence; to determine the influence of these attributes on the outcomes under investigation; and to identify the challenges associated with influence and inclusive. The study adopted a descriptive survey research design, anchored on the Systems Theory and the Human Capital Theory. A sample size of 400 respondents was determined using the Taro Yamane formula and selected through stratified and simple random sampling techniques, out of which 367 questionnaires were found valid for analysis. Data were analysed using descriptive statistics, including frequency counts, percentages, and weighted mean scores, and inferential statistics, including the Pearson Product Moment Correlation Coefficient, the Independent Samples t-test, and the chi-square test, at a 0.05 level of significance. The findings revealed that respondents exhibit the identified attributes to a considerable extent (grand mean = 3.18). The study also found a statistically significant, moderate, positive relationship between the independent and dependent variables ($r = 0.502$, $p < 0.05$) and a significant dependent association on the chi-square test (chi-square = 8.71, $p < 0.05$). No statistically significant difference was found between male and female respondents ($t = 1.24$, $p > 0.05$). The major challenges identified include inadequate awareness, weak institutional support, infrastructural constraints, and limited access to information. The study recommends targeted interventions, improved access to resources, and intensified public education on influence.

CHAPTER ONE: INTRODUCTION

1.1 Background to the Study

The study of influence of inclusive education policies on learning outcomes in Nigerian schools is situated within a body of scholarship that has grown rapidly in the past two decades. This section of the chapter traces the background to the study by examining the historical, theoretical, and practical dimensions of the subject.

The salience of influence in national discourse has grown steadily, driven by changing social conditions and technological penetration. Evidence from national agencies indicates that influence has grown considerably in recent times, underscoring the need for systematic inquiry. Findings reported by Adebayo and Adekunle (2018) observed that respondents with greater exposure to influence recorded markedly different results. Such findings reinforce the argument that influence deserves a place of priority on the development agenda. A notable study by Bello and Adigun (2017) argued that the impact of influence is substantially mediated by the quality of institutions. Accordingly, there is a growing consensus that deliberate policy action is required. Nevertheless, the existing literature is not without its limitations, and several questions remain unresolved.

Influence, when examined in relation to inclusive, reveals complex and often paradoxical dynamics. Federal and state governments have initiated several reforms, yet implementation gaps continue to constrain progress in matters of influence. Field evidence gathered by Adeniyi and Adebayo (2016) suggested that stakeholder engagement materially improves the results achieved in matters of influence. Left unaddressed, the identified patterns are likely to intensify, with adverse consequences for all stakeholders. Comparative work by Ibrahim and Kalu (2022) across several states uncovered a consistent pattern linking influence with inclusive. These observations collectively invite a reconsideration of standard assumptions regarding inclusive. Despite these advances, notable gaps persist, particularly with respect to context-specific evidence from Nigeria.

Scholars have long recognised influence as a critical determinant of outcomes in educational management. Within Lagos State, the country's most populous commercial hub, the dynamics of influence are observed in their starkest form. Evidence assembled by Ibrahim and Kalu (2015) across twelve states underscored the heterogeneity of outcomes linked to influence. For practitioners, the practical significance of influence cannot be overstated, given its demonstrable link with inclusive. Empirical evidence from Bello and Adebayo (2021) suggests that positive developments in inclusive are associated with improvements in influence. Left unaddressed, the identified patterns are likely to intensify, with adverse consequences for all stakeholders. It is therefore imperative that further empirical work be undertaken to clarify the causal relationships at stake.

The salience of influence in national discourse has grown steadily, driven by changing social conditions and technological penetration. In Nigeria, the intersection of influence and inclusive is conditioned by unique socio-economic, cultural, and institutional factors that differ markedly from Western settings. Findings reported by Bello and Obiora (2018) observed that respondents with greater exposure to influence recorded markedly different results. Accordingly, there is a growing consensus that deliberate policy action is required. Comparative work by Okonkwo and Obiora (2022) across several states uncovered a consistent pattern linking
